Public Health Prevent. Promote. Protect. Central Valley Health District

Through a joint effort, Wishek Hospital & Clinics, Central Valley Health District, and McIntosh District Health Unit – with assistance from the Center for Rural Health at the University of North Dakota School of Medicine and Health Sciences – conducted a community health needs assessment in 2014. The Center for Rural Health's involvement was funded through its Medicare Rural Hospital Flexibility (Flex) Program. The Flex Program is federally funded by the Office of Rural Health Policy and as such associated costs of the assessment were covered by a federal grant.

## **Executive Summary**

To help inform future decisions and strategic planning, Wishek Hospital & Clinics (WH&C), Central Valley Health District, and McIntosh District Health Unit conducted a community health needs assessment in LaMoure, Logan, and McIntosh counties. The Center for Rural Health at the University of North Dakota School of Medicine and Health Sciences facilitated the assessment, which included the solicitation of input from area community members as well as analysis of community health-related data.

To gather community feedback, residents of the counties and local health care professionals were given the chance to participate in a survey. Approximately 150 community members and health care professionals took the survey. Additional information was collected through a Community Group comprised of community members and through key informant interviews with community leaders. More than 35 residents participated as a Community Group member, key informant interviewee, or both. The input from all of these residents represented the broad interests of the community served by Wishek Hospital & Clinics, Central Valley Health District, and McIntosh District Health Unit. Together with secondary data gathered from a wide range of sources, the information gathered presents a snapshot of health needs and concerns in the community.

A large portion of the area population is over age 65. In all three counties, more than one in four residents is aged 65 or older, and in McIntosh County nearly one in three residents is 65 or older. These percentages are nearly double the rate of North Dakota as a whole. The median age in all three counties is at least ten years older than the state median age of 36.9. The counties also have a very low population density, meaning emergency medical services face challenges in responding to emergencies with a small population that is dispersed over a large area. Logan County, in particular, is very sparsely populated, averaging only two people per square mile.

Data compiled by County Health Rankings show the counties face challenges on a number of measures that influence health, such as health behaviors, clinical care, social and economic factors, and the physical environment. Factors which were particularly notable included:

- Adult smoking in LaMoure was substantially higher (nine percentage points) than the state rate.
- The rate of adult obesity in Logan County was five points higher than the state rate.

- All three counties have high rates of physical inactivity, indicating a region-wide trend.
- Logan County has a rate of uninsured residents that is seven percentage points higher than the state rate.
- All three counties have a higher ratio of residents to primary care physicians than the state ratio. Likewise, Logan and McIntosh counties have higher than average ratios of residents to dentists.
- LaMoure County had a very high ratio of residents to mental health providers (more than three times the state rate).
- McIntosh County had a rate of inadequate social support that, along with two other counties, is the worst in the state.
- Logan County's rate of drinking water violations was 14 times the North Dakota average.

Results from the survey revealed that of 45 potential community and health needs set forth in the survey, area residents collectively chose the following six needs as the most important, indicating a clear focus on financial and cost concerns:

- 1. Cost of health insurance
- 2. Cost of health care
- 3. Cost of prescription drugs
- 4. Availability of doctors, nurses, specialists
- 5. Cancer
- 6. Financial viability of hospital

The survey also revealed that the biggest barriers to receiving health care as perceived by community members were lack of evening or weekend hours, lack of doctors, and inability to see the same provider over time. When asked what the good aspects of the counties were, respondents indicated that the top community assets were:

- Friendly and helpful people
- Quality schools and youth programs
- Family-friendly environment
- A safe place to live
- Cleanliness of the area

Input from Community Group members and community leaders provided via a focus group and key informant interviews echoed many of the concerns raised by survey respondents. Thematic concerns emerging from these sessions were:

- Lack of long-term physicians/continuity of care
- Need for dialysis services
- Cost of health care, insurance, and prescription drugs
- Lack of mental health services
- Desire for more appointment options

Following careful consideration of the results and findings of this assessment, Community Group members determined that the significant health needs or issues in the community are:

- 1. The cost of health insurance
- 2. Lack of mental health services
- 3. Inability to see same provider over time
- 4. Cost of health care
- 5. Cost of prescription drugs

## **Overview and Community Resources**

The purpose of conducting a community health assessment is to describe the health of local people, identify areas for health improvement, identify use of local health care services, determine factors that contribute to health issues, identify and prioritize community needs, and help health care leaders identify potential action to address the community's health needs. A health needs assessment benefits the community by: 1) collecting timely input from the local community, providers, and staff; 2) providing an analysis of secondary data related to health-related behaviors, conditions, risks, and outcomes; 3) compiling and organizing information to guide decision making, education, and marketing efforts, and to facilitate the development of a strategic plan; and 4) engaging community members about the future of health care. Completion of a health assessment also is a requirement for public health departments seeking accreditation.

With assistance from the Center for Rural Health at the University of North Dakota School of Medicine and Health Sciences, Wishek Hospital & Clinics (WH&C), Central Valley Health District (CVHD), and McIntosh District Health Unit (MDHU) completed a community health assessment in LaMoure, Logan, and McIntosh counties. Many community members and stakeholders worked together on the assessment.

Wishek, in McIntosh County, is located in south central North Dakota, approximately 85 miles from Jamestown, 100 miles from Bismarck, and approximately 20 miles from the South Dakota border. The community features more than 140 businesses and organizations, modern fiber optic Internet connectivity, and an annual three-county fair. Wishek's school system provides educational opportunities to students K-12. Wishek also has an active senior center with daily activities.

WH&C- through its hospital and clinic in Wishek and its clinics in Gackle, Kulm, and Napoleon – serves a large area in south central North Dakota. Its clinics are located in the three counties covered by this assessment. CVHD's public health jurisdiction includes Logan County; MDHU is a one-county public health unit covering McIntosh County. In addition to Wishek, Gackle, Kulm, and Napoleon, located in the counties covered in this study are the North Dakota communities of Berlin, Dickey, Edgeley, Fredonia, Jud, LaMoure, Lehr, Marion, Verona, and Zeeland. Figure 1 illustrates the location of the counties.

Figure 1: Counties Included in Assessment: LaMoure, Logan, and McIntosh

Recreational facilities in Wishek include a 24/7 fitness center, city swimming pool and golf course. The area offers an abundance of hunting, fishing, and outdoor recreational opportunities.

Other health care facilities and services in the area include the following:

<u>Basic care facilities</u> Edgeley – 40-bed basic care facility Gackle – 41-bed basic care facility

<u>Nursing homes</u> Wishek – 60-bed nursing home LaMoure – 40-bed nursing home Napoleon – 44-bed nursing home

Rural health clinics LaMoure <u>Pharmacies</u> Wishek – one retail pharmacy in addition to the WH&C pharmacy Edgeley LaMoure Napoleon

## **Wishek Hospital & Clinics**

Wishek Hospital & Clinics includes a 24-bed critical access hospital and a rural health clinic located in Wishek, ND, as well as rural health clinics in the neighboring communities of Gackle, Kulm, and Napoleon. WH&C's hospital, an accredited level V trauma center, provides comprehensive care for a wide range of medical and emergency situations. With more than 100 employees, WH&C is one of the larger employers in the region.

Community-owned WH&C offers a wide range of services including acute care, diagnostics, radiology, wellness services, rehabilitation care, chronic care management, family medicine, and pediatrics. Minor surgical procedures are available at WH&C, as well as joint injections, lesion removal and biopsies, and care for sports injuries.

Wishek Hospital & Clinics defines its mission as follows:

[WH&C] provides quality healthcare service with concern and compassion in a cost-effective manner. [WH&C] will distinguish itself as a leader in the provision of quality healthcare services in South Central North Dakota.

Services offered locally by Wishek Hospital & Clinics include:

#### **General and Acute Services**

- Ambulance service
- Clinics
- Critical care unit
- Emergency room
- Family medicine and primary care
- Hospital
- Minor surgical procedures

- Nutrition services
- Pharmacy
- Preventive visits
- Social services
- Sports injuries
- Swing bed services
- Telemedicine

#### **Screening/Therapy Services**

- Asthma testing
- Cardiac rehab
- Childhood vaccines
- Chronic care management
- Diabetes care
- EKG's

- Holter monitors (heart monitors)
- Laboratory services
- Physical therapy
- Sleep studies
- Well baby checkups
- Women's wellness exams

#### **Radiology Services**

- Bone density testing
- Cardio stress test
- CT scan
- General x-rays
- Mammography (provided via mobile unit)
- MRI (provided via mobile unit)
- Nuclear medicine (provided via mobile unit)
- Teleradiology
- Ultrasound (provided via mobile unit)

#### Services offered by OTHER providers/organizations

- Chiropractic care
- Dental care
- Fitness center

- Home health
- Vision care

WH&C also operates a foundation whose mission is "to help provide the philanthropic and community resources needed to improve the health and welfare of the residents in the communities of [the] service area" and whose focus is "to provide funds to enhance the health care services and facilities for the direct benefit to residents in south central North Dakota and to improve the image of the institution as a community serviceoriented organization."

## **Central Valley Health District and McIntosh District Health Unit**

CVHD is the public health department for Logan and Stutsman counties in south central North Dakota. Its Logan County offices are located in Napoleon and Gackle, while its Stutsman County office is in Jamestown. CVHD sets forth its vision as "to be the healthiest community to live, learn, work, and play," while its mission is described as: "Prevent, promote, protect for optimal community health."

Services offered by CVHD include:

- Emergency preparedness and response
- Environmental health, providing environmental health services and education in eight counties in the region
- Family planning services, with satellite clinics available in Valley City and Carrington and fees based on income and family size
- Nursing services, including health assessments, tuberculosis testing, lipid profiles, footcare clinics, home visits, health maintenance clinics, Health Tracks child health screening, medication monitoring and setup, and therapeutic procedures
- Sexual assault nurse examiners
- School nursing services
- Tobacco prevention
- Women, Infant & Children (WIC) program
- Women's Way program

McIntosh District Health Unit (MDHU) covers all of McIntosh County, which includes the towns of Wishek, Ashley, Lehr, and Zeeland. Its offices are located in Ashley.

## **Assessment Process**

The Center for Rural Health provided substantial support to the local health organizations in conducting this needs assessment. The Center for Rural Health is one of the nation's most experienced organizations committed to providing leadership in rural health. Its mission is to connect resources and knowledge to strengthen the health of people in rural communities. As the federally designated State Office of Rural Health (SORH) for the state and the home to the North Dakota Medicare Rural Hospital Flexibility (Flex) program, the Center connects the School of Medicine and Health Sciences and the university to rural communities and their health institutions to facilitate developing and maintaining rural health delivery systems. In this capacity the Center works both at a national level and at state and community levels.

The assessment process was collaborative. Professionals from WH&C, CVHD, and MDHU were heavily involved in planning and implementing the process. They met periodically by telephone conference and via email with representatives from the Center for Rural Health. Input on designing the assessment process was sought from public health professionals who work in the rural parts of the counties, as well as those with years of experience serving the population of the area. The Community Group (described in more detail below) provided in-depth information and informed the assessment on community perceptions, community resources, community needs, and ideas for improving the health of the population and health care services. Representatives from WH&C were involved considerably in planning the Community Group meetings. Members of the Community Group itself comprised many residents from outside the hospital and health departments.

As part of the assessment's overall collaborative process, the Center for Rural Health spearheaded efforts to collect data for the assessment in a variety of ways: (1) a survey solicited feedback from area residents, (2) community leaders representing the broad interests of the community took part in one-on-one key informant interviews; (3) the Community Group comprised of community leaders and area residents was convened to discuss area health needs and inform the assessment process; and (4) a wide range of secondary sources of data was examined, providing information on a multitude of measures including demographics; health conditions, indicators, and outcomes; rates of preventive measures; rates of disease; and at-risk behaviors.

Detailed below are the methods undertaken to gather data for this assessment by convening a Community Group, conducting key informant interviews, soliciting feedback about health needs via a survey, and researching secondary data.

### **Community Group**

A Community Group consisting of 25 community members was convened and met on September 30, 2014. During this first Community Group meeting, group members were introduced to the needs assessment process, reviewed basic demographic information about the assessment service area, and served as a focus group. Focus group topics included the general health needs of the community, delivery of health care by local providers, awareness of health services offered locally, barriers to using local services, suggestions for improving collaboration within the community, reasons community members use WH&C, reasons community members use other facilities for health care, and local health care delivery concerns.

The Community Group met again on December 2, 2014. At this second meeting the Community Group was presented with survey results, findings from key informant interviews and the focus group, and a wide range of secondary data relating to the general health of the population in the three counties studied. The group was then tasked with identifying and prioritizing the community's health needs.

Members of the Community Group represented the broad interests of communities throughout the three-county area. They included representatives of the health community, business community, agriculture, political bodies, education, and social service agencies. Not all members of the group were present at both meetings.

### Interviews

One-on-one interviews with key informants in the area were conducted in person on September 30 and October 1, 2014. A representative of the Center for Rural Health conducted the interviews, which took place in Kulm, Lehr, Napoleon, and Wishek. Interviewees included political leaders, business leaders, law enforcement, health care leaders, and education professionals. A second round of interviews was conducted in October 2014 with public health professionals. A nursing education graduate student, working with CVHD, conducted the interviews and reported the results to the Center for Rural Health. Including both rounds of interviews, 14 key informants were interviewed as part of the assessment process.

### **Survey**

A survey was distributed to gather feedback from the community. The survey was not intended to be a scientific or statistically valid sampling of the population. Rather, it was designed to be an additional tool for collecting qualitative data from the community at large – specifically, information related to community-perceived health needs.

The survey was distributed to various residents of LaMoure, Logan, and McIntosh counties. The survey tool was designed to:

- Learn of the good things in the community and the community's concerns;
- Understand perceptions and attitudes about the health of the community, and hear suggestions for improvement; and
- Learn more about how local health services are used by residents.

Specifically, the survey covered the following topics: residents' perceptions about community assets, levels of collaboration within the community, broad areas of community and health concerns, awareness and use of local health services, barriers to using local health care, preferences for using local health care versus traveling to other facilities, travel time to their clinic and hospital, suggestions to improve community health, and basic demographic information.

Approximately 750 community member surveys were available for distribution in the counties. The surveys were distributed by Community Group members as well as through the hospital, clinics, nursing homes, and public health professionals. To help ensure anonymity, included with each survey was a postage-paid return envelope to the Center for Rural Health. In addition, to help make the survey as widely available as possible, residents also could request a survey by calling WH&C. The survey period ran from September 30 to October 31, 2014, and 140 surveys were returned.

Area residents also were given the option of completing an online version of the survey, which was publicized in the local newspaper and by WH&C and the local public health units. Sixteen online surveys were completed. In total, counting both paper and online surveys, 156 community member surveys were submitted.

Surveys were submitted by residents of many communities. While not all survey respondents provided a home zip code, most did. The number of surveys from each community was:

- Wishek 93
- Napoleon 26

- Gackle 5
- Lehr 5
- Ashley 4
- Kintyre 3
- Streeter 2
- Fredonia 1
- Linton 1

## **Secondary Research**

Secondary data was collected and analyzed to provide descriptions of: (1) population demographics, (2) general health issues (including any population groups with particular health issues), and (3) contributing causes of community health issues. Data were collected from a variety of sources including the U.S. Census Bureau; the North Dakota Department of Health; the Robert Wood Johnson Foundation's County Health Rankings (which pulls data from 20 primary data sources); the National Survey of Children's Health Data Resource Center; the Centers for Disease Control and Prevention; the North Dakota Behavioral Risk Factor Surveillance System; and the National Center for Health Statistics.

## **Demographic Information**

Table 1 summarizes general demographic and geographic data about LaMoure, Logan, and McIntosh counties.

TABLE 1: NORTH DAKOTA COUNTY INFORMATION AND DEMOGRAPHICS         (From 2010 Census; 2013 estimates used where available)					
	LaMoure County	Logan County	McIntosh County	North Dakota	
Population (2013 est.)	4,166	1,946	2,754	723,393	
Population change (2010-2013)	0.7%	-2.2%	-2.0%	7.6%	
People per square mile (2010)	3.6	2.0	2.9	9.7	
Persons 65 years or older (2013 est.)	25.4%	27.2%	32.2%	14.2%	
Persons under 18 years (2013 est.)	20.7%	20.8%	18.8%	22.5%	
Median age (2012 est.)	48.6	51.1	53.1	36.9	
White persons (2013 est.)	98.6%	98.1%	97.8%	89.6%	
Language other than English spoken at home (2012 est.)	5.6%	13.6%	21.4%	5.2%	
High school graduates (2012 est.)	86.7%	75.7%	74.6%	90.5%	
Bachelor's degree or higher (2012 est.)	20.7%	12.9%	18.6%	27.1%	
Live below poverty line (2012 est.)	8.9%	10.7%	12.2%	12.1%	
Children under 18 in poverty	10%	16%	19%	14%	

The data show that the populations of Logan and McIntosh counties have been decreasing in recent years, while LaMoure County's population has increased slightly. These trends are markedly different from the overall direction of population growth in North Dakota as a whole. From 2010 to 2013, the state's population has grown by an estimated 7.6%. Demographic information and trends that have implications for the community's health and the delivery of health care include:

- A rate of people aged 65 and older that is significantly above the state average indicates an increased need for health care services.
- A rate of residents with at least a bachelor's degree that is well below the state rate may have implications for recruiting and retaining qualified health care workers.
- A very low population density, meaning emergency medical services face challenges in responding to emergencies with a small population that is dispersed over a large area.

## **Health Conditions, Behaviors, and Outcomes**

As noted above, several sources were reviewed to inform this assessment. This data is presented below in three categories: (1) County Health Rankings, (2) public health community profiles, and (3) children's health.

## **County Health Rankings**

The Robert Wood Johnson Foundation, in collaboration with the University of Wisconsin Population Health Institute, has developed County Health Rankings to illustrate community health needs and provide guidance for actions toward improved health. In this report, Morton County is compared to North Dakota rates and national benchmarks on various topics ranging from individual health behaviors to the quality of health care.

The data used in the 2014 County Health Rankings are pulled from more than 20 data sources and then are compiled to create county rankings. Counties in each of the 50 states are ranked according to summaries of a variety of health measures. Those having high ranks, such as 1 or 2, are considered to be the "healthiest." Counties are ranked on both health outcomes and health factors. Below is a breakdown of the variables that influence a county's rank. A model of the County Health Rankings – a flow chart of how a county's rank is determined – may be found in Appendix B. For further information, visit the County Health Rankings website at www.countyhealthrankings.org.

#### **Health Outcomes**

- Length of life
- Quality of life

#### **Health Factors**

- Health Behavior
  - Smoking
  - Diet and exercise
  - Alcohol and drug use
  - Sexual activity
- Clinical Care
  - Access to care
  - Quality of care

#### Health Factors (continued)

- Social and Economic Factors
  - Education
  - $\circ$  Employment
  - o Income
  - Family and social support
  - Community safety
- Physical Environment
  - Air and water quality
  - Housing and transit

Table 2 summarizes the pertinent information taken from County Health Rankings as it relates to LaMoure, Logan, and McIntosh counties. It is important to note that these

statistics describe the population of each county, regardless of where county residents choose to receive their medical care. In other words, all of the following statistics are based on the health behaviors and conditions of the county's residents, not necessarily patients and clients of WH&C, CVHD, or MDHU.

For most of the measures included in the rankings, the County Health Rankings' authors have calculated the "Top U.S. Performers" for 2014. The Top Performer number marks the point at which only 10% of counties in the nation do better, i.e., the 90th percentile or 10th percentile, depending on whether the measure is framed positively (such as high school graduation) or negatively (such as adult smoking).

LaMoure, Logan, and McIntosh counties' rankings within the state also are included in the summary below. For example, McIntosh County ranks 33<sup>rd</sup> out of 45 ranked counties in North Dakota on health *outcomes*, while LaMoure County ranked 17<sup>th</sup>. There was insufficient data from Logan County for County Health Rankings to assign numerical ranks to it. On the health *factors* measures, McIntosh County ranked 28<sup>th</sup> among North Dakota counties, while LaMoure County ranked 8<sup>th</sup>.

The measures marked with a red checkmark ( $\checkmark$ ) are those where the respective county is not measuring up to the state rate. Measures marked with a smiling icon ( $\odot$ ) indicate that the county is performing well enough that it is within the Top 10% of counties nationally.

TABLE 2: SELECTED OUTCOME MEASURES FROM COUNTY HEALTH RANKINGS					
	LaMoure County	Logan County	McIntosh County	U.S. Top 10%	North Dakota
Ranking: Outcomes	17th	NR	33rd		(of 45)
Premature death	7,220 🗸	-	6,839 🗸	5,317	6,244

Drinking water violations	0% 🙂	14% 🗸	2% 🗸	0%	1%
Severe housing problems	8% ©	10%	11%	9%	11%

#### **Health Outcomes**

With respect to health outcomes, Logan County tends to lag the state on measures of self-reported health and rates of diabetes. Additionally, LaMoure and McIntosh counties had higher rates of premature death than the rest of the state. All three counties had higher rates of diabetes than the state average. On the positive side, LaMoure County was performing in the Top 10% of counties nationally on measures of self-reported daily physical and mental health.

#### **Health Factors**

In examining the health factors, which include health behaviors, clinical care measures, social and economic factors, and the physical environment. Measures that were particularly concerning included:

- Adult smoking in LaMoure was substantially higher (nine percentage points) than the state rate.
- The rate of adult obesity in Logan County was five points higher than the state rate.
- According to the food environment index, residents' access to fresh and healthy foods is limited in LaMoure and Logan counties.
- All three counties have high rates of physical inactivity, indicating a region-wide trend. Especially concerning is McIntosh County's rate of 38%, which is 12 percentage points higher than the North Dakota average, and the worst of all ranked counties in the state.
- Residents in LaMoure and Logan counties have limited access to exercise opportunities.
- Logan County has a rate of uninsured residents that is seven percentage points higher than the state rate.
- All three counties have a higher ratio of residents to primary care physicians than the state ratio. Likewise, Logan and McIntosh counties have higher than average ratios of residents to dentists.
- LaMoure County had a very high ratio of residents to mental health providers (more than three times the state rate).
- McIntosh County had a rate of inadequate social support that, along with two other counties, is the worst in the state.
- Logan County's rate of drinking water violations was 14 times the North Dakota average, an alarming report that warrants further investigation.

It should be noted that County Health Rankings lacked adequate data to report on sufficiency of mental health providers in Logan and McIntosh counties. The fact that data are not included for this measure should not be interpreted to mean that this is not a concerning issue in those counties.

There were also positive trends in the data reported by County Health Rankings. At least two of the three counties were performing in the top 10% of counties nationwide on the following measures:

- Proactive screening for diabetes
- Unemployment rates
- Children in single-parent households
- Violent crime rates

## **Public Health Community Health Profile**

Included as Appendices C, D, and E are the North Dakota Department of Health's community health profiles for the public health units that cover the three counties studied in this assessment.

In assessing the region's health needs, attention should be paid to information provided in the public health profiles about leading causes of death by age group, as well as quality of life issues and conditions such as arthritis, asthma, cardiovascular disease, cholesterol, crime, drinking habits, fruit and vegetable consumption, health insurance, health screening, high blood pressure, mental health, obesity, physical activity, smoking, stroke, tooth loss, and vaccination.

## **Children's Health**

The National Survey of Children's Health touches on multiple intersecting aspects of children's lives. Data are not available at the county level; listed below is information about children's health in North Dakota. The full survey includes physical and mental health status, access to quality health care, and information on the child's family, neighborhood, and social context. Data are from 2011-12. More information about the survey may be found at: www.childhealthdata.org/learn/NSCH.

Key measures of the statewide data are summarized below. The rates highlighted in **red** signify that the state is faring worse on that measure than the national average.

TABLE 3: SELECTED MEASURES REGARDING CHILDREN'S HEALTH (For children aged 0-17 unless noted otherwise)				
Health Status	North Dakota	National		
Children born premature (3 or more weeks early)	10.8%	11.6%		
Children 10-17 overweight or obese	35.8%	31.3%		
Children 0-5 who were ever breastfed	79.4%	79.2%		
Children 6-17 who missed 11 or more days of school	4.6%	6.2%		
Health Care				
Children currently insured	93.5%	94.5%		
Children who had preventive medical visit in past year	78.6%	84.4%		
Children who had preventive dental visit in past year	74.6%	77.2%		
Young children (10 mos5 yrs.) receiving standardized screening for developmental or behavioral problems	20.7%	30.8%		
Children aged 2-17 with problems requiring counseling who received needed mental health care	86.3%	61.0%		
Family Life				
Children whose families eat meals together 4 or more times per week	83.0%	78.4%		
Children who live in households where someone smokes	29.8%	24.1%		
Neighborhood				
Children who live in neighborhood with a park, sidewalks, a library, and a community center	58.9%	54.1%		
Children living in neighborhoods with poorly kept or rundown housing	12.7%	16.2%		
Children living in neighborhood that's usually or always safe	94.0%	86.6%		

The data on children's health and conditions reveals that while North Dakota is doing better than the national averages on a few measures, it is not measuring up to the national averages with respect to:

- Obese or overweight children
- Children with health insurance
- Preventive primary care and dentist visits
- Developmental/behavioral screening
- Children in smoking households

Importantly, more than one in five of the state's children are not receiving an annual preventive medical visit or a preventive dental visit. Lack of preventive care now affects these children's future health status.

Table 4 includes selected county-level measures regarding children's health in North Dakota. The data come from North Dakota KIDS COUNT, a national and state-by-state effort to track the status of children, sponsored by the Annie E. Casey Foundation. KIDS

COUNT data focus on main components of children's well-being; more information about KIDS COUNT is available at www.ndkidscount.org. The measures highlighted in **red** in the table are those on which the respective county is doing worse than the state average. The year of the most recent data is noted.

The data show that as a region, the three counties generally are not performing as well as the state as a whole on the selected measures. All three counties are lagging with respect to health insurance for children and licensed child care capacity. Additionally, two of the three counties have higher rates of high school dropouts than the state rates.

TABLE 4: COUNTY-LEVEL MEASURES REGARDING CHILDREN'S HEALTH					
	LaMoure County	Logan County	McIntosh County	North Dakota	
Uninsured children (% of population age 0-18), 2012	8.3% 🗸	13.4% 🗸	11.0% 🗸	7.3%	
Uninsured children below 200% of poverty (% of population), 2012	54.2% 🗸	61.8% 🗸	61.4% 🗸	51.9%	
Medicaid recipient (% of population age 0-20), 2013	15.1%	21.0%	26.9%	28.0%	
Children enrolled in Healthy Steps (% of population age 0-18), 2013	2.8% 🗸	6.2% 🗸	5.6% 🗸	2.5%	
Supplemental Nutrition Assistance Program (SNAP) recipients (% of population age 0-18), 2012	11.3%	13.6%	18.3%	23.0%	
Licensed child care capacity (% of population age 0-13), 2014	32.6% 🗸	32.4% 🗸	26.9% 🗸	40.0%	
High school dropouts (% of grade 9-12 enrollment), 2013	4.3% 🗸	3.4% 🗸	0.0%	2.8%	

## **Survey Results**

Survey results are reported in several categories, including demographics, health status and access, awareness and use of health services, barriers to health care, community and health concerns, collaboration, and community assets.

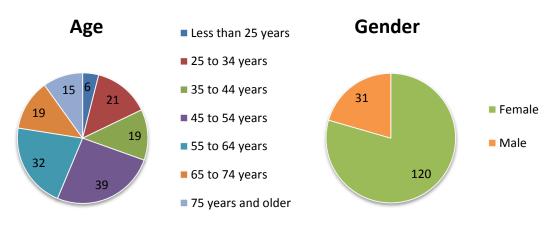

## **Survey Demographics**

To better understand the perspectives being offered by survey respondents, surveytakers were asked a few demographic questions. Throughout this report, numbers (N) instead of percentages (%) are reported because percentages can be misleading with smaller numbers. Survey respondents were not required to answer all survey questions; they were free to skip any questions they wished.

With respect to demographics of those who chose to take the survey:

- A slight majority (N=85) were aged 54 or younger, although there was a fairly even distribution of ages.
- A large majority (N=120) were female.
- A plurality of respondents (N=50) had bachelor's degrees.
- Most (N=101) worked full-time, or were retired (N=26).
- A majority of respondents (N=84) had household incomes of less than \$75,000, with a plurality (N=38) reporting household income of between \$50,000 and \$74,999.

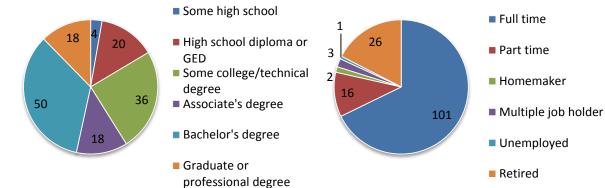

Figure 2 shows these demographic characteristics. It illustrates the wide range of community members' household income and indicates how this assessment took into account input from parties who represent the varied interests of the community served, including wide age ranges, those in diverse work situations, and lower-income community members. Of those who provided a household income, 12 community members reported a household income of less than \$25,000.

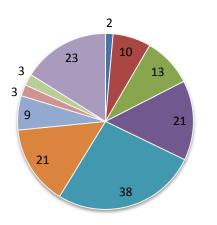

#### Figure 2: Demographics of Survey-Takers

**Education Level** 

### **Employment Status**

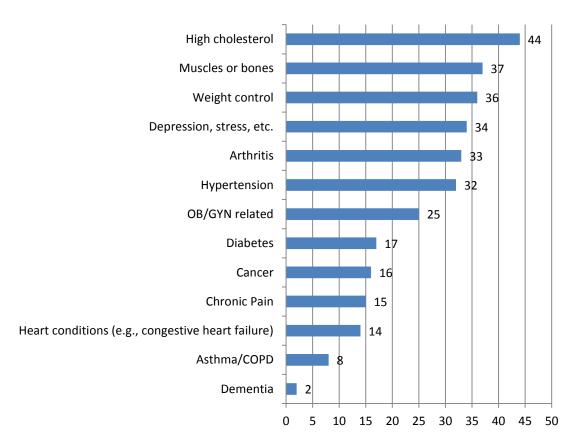

### **Household Income**

- . . . . . . . . .
- \$0 to \$14,999
- \$15,000 to \$24,999
- \$25,000 to \$34,999
- \$35,000 to \$49,999
- **\$50,000 to \$74,999**
- **\$75,000 to \$99,999**
- \$100,000 to \$149,999
- \$150,000 to \$199,999
- \$200,000 and over
- Prefer not to answer

### **Health Status and Access**

Community members were asked to identify general health conditions and/or diseases that they have. As illustrated in Figure 3, the results demonstrate that the assessment took into account input from those with chronic diseases and conditions. The conditions reported most often were high cholesterol (N=44), muscles or bones (e.g., back problems, broken bones) (N=37), weight control (N=36), and mental health concerns (N=34).

Community members also were asked what, if any, health insurance they have. Health insurance status often is associated with whether people have access to health care. As demonstrated in Figure 4, the most common insurance types were insurance through one's employer (N=83), private insurance (N=54), and Medicare (N=30).

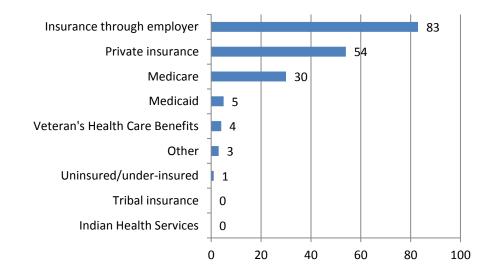

Figure 4: Insurance Status

## **Community Concerns**

Respondents were asked to review lists of potential community and health concerns and rank each of them on a scale of 1 to 5 based on the importance of each potential concern to the community, with 5 being more of a concern and 1 being less of a concern. The potential health concerns were listed in three categories: (1) access to health care, (2) community/environmental concerns, and (3) physical and mental health concerns. In all, 45 potential needs were listed.

A clear trend emerged from respondents' rankings: Community members expressed the most concern about expenses and costs related to health care and health insurance. The top three concerns were (with the average ranking on the 1-to-5 scale):

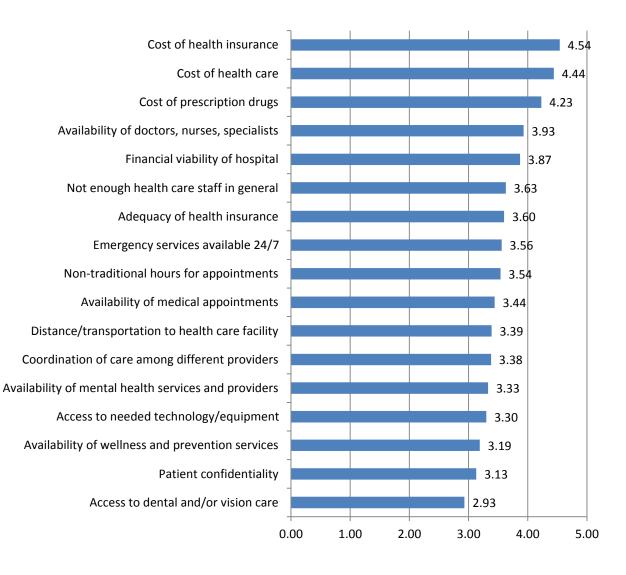

- 1. Cost of health insurance (4.54)
- 2. Cost of health care (4.44)
- 3. Cost of prescription drugs (4.23)

The next three most highly ranked concerns covered a broader range of issues:

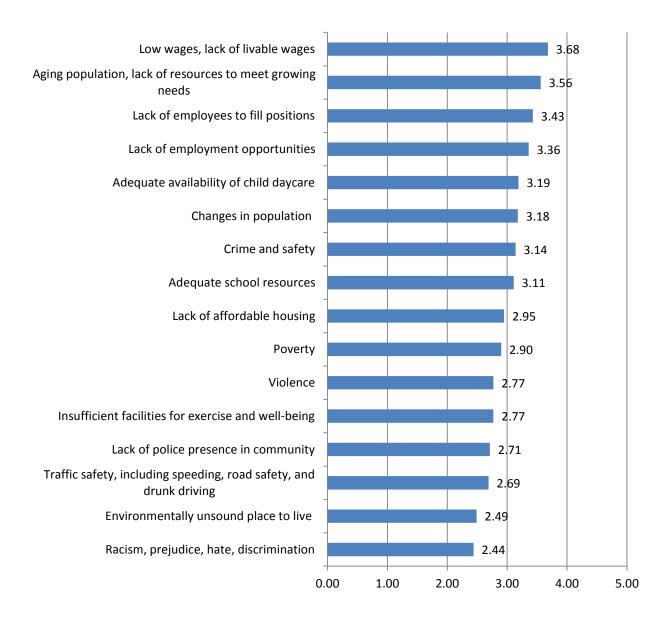

- 4. Availability of doctors, nurses, specialists (3.93)
- 5. Cancer (3.91)
- 6. Financial viability of hospital (3.87)

Community members generally rated the access to health care concerns more highly than the concerns in the other lists. Community members were least concerned about

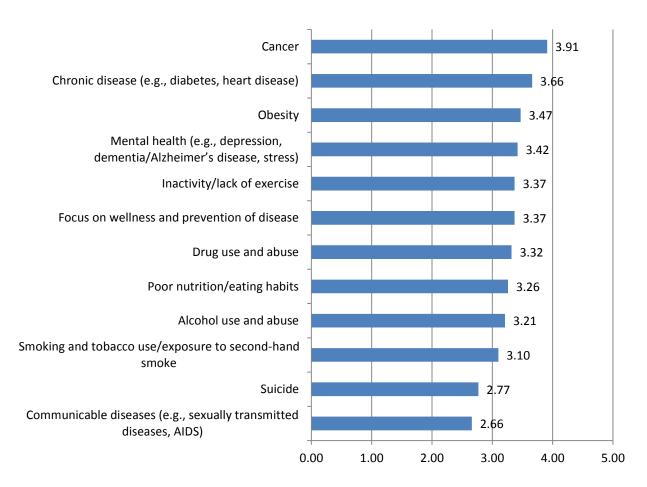

communicable diseases, living in an environmentally unsound place, and racism and prejudice. Figures 5 through 7 illustrate these results.

#### Figure 5: Community Concerns – Access to Health Care

#### Figure 6: Community/Environmental Concerns

#### Figure 7: Physical and Mental Health Concerns

## Awareness of Services

The survey asked community members whether they were aware of the services offered locally by Wishek Hospital & Clinics as well as services offered locally by other providers. The survey question was asked in subparts, with locally available services divided into four categories: (1) general and acute, (2) screening and therapy, (3) radiology, and (4) services offered locally by providers other than WH&C.

Community members taking the survey generally were aware of many of the services offered by WH&C and other local providers. Community members were most aware of the following services (with the parenthetical number indicating the number of survey takers responding that they were aware of the service):

- Ambulance service (140)
- Emergency room (126)
- Hospital (122)

- Swing bed services (119)
- Clinics (117)
- Physical therapy (116)
- Chiropractic care (116)
- Family medicine and primary care (115)
- Laboratory services (113)
- General x-rays (111)
- CT scan (110)
- Mammography (109)
- Childhood vaccines (108)
- Sports injuries (107)
- Women's wellness exams (107)
- Minor surgical procedures (106)
- EKGs (106)

Respondents were least aware of the following services:

- Teleradiology (65)
- Asthma testing (67)
- Sleep studies (78)
- Chronic care management (79)
- Nuclear medicine (provided via mobile unit) (79)
- Nutrition services (84)
- Well baby checkups (85)
- Preventive visits (87)

These services with lower levels of awareness may present opportunities for further marketing, greater utilization, and increased revenue. Figures 8 to 11 detail community members' awareness of local services.

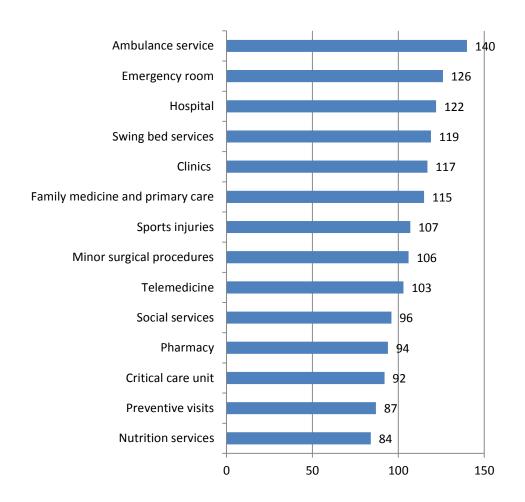

Figure 8: Awareness of Locally Available General and Acute Health Care Services

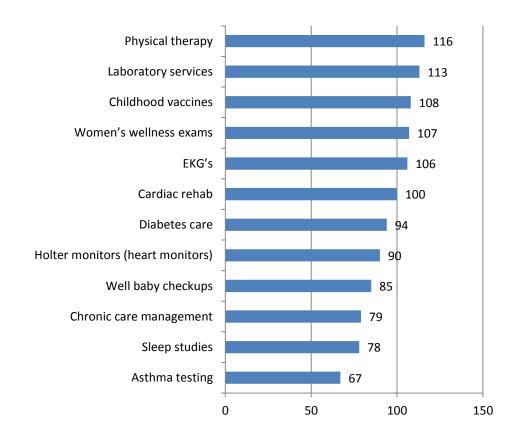

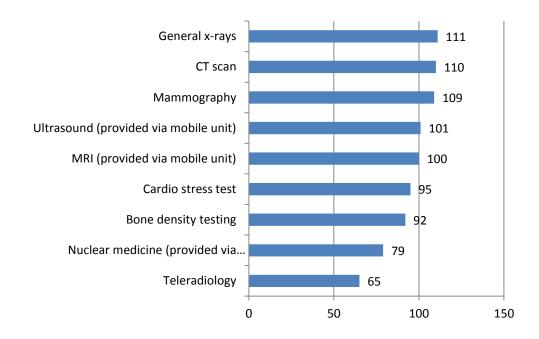

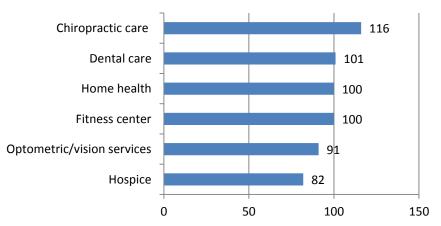

Figure 9: Awareness of Locally Available Screening/Therapy Services

#### Figure 10: Awareness of Locally Available Radiology Services

Information about how community members learn of local services emerged during the focus group session and key informant interviews. Participants said that most people generally learn about services through their primary care provider, by calling the hospital or clinics, by word of mouth, from newsletters that are mailed, and from social media.

### **Health Service Use**

Community members were asked to review a list of services provided locally by Wishek Hospital & Clinics, as well as by other local providers, and indicate whether they had used those services at Wishek Hospital & Clinics, at another facility, or both. Figures 12 to 15 illustrate these results.

Community members responding indicated that the services most commonly used locally were:

- Clinics (117)
- Family medicine and primary care (95)
- Laboratory services (90)
- Emergency room (90)
- Chiropractic care (89)
- General x-rays (81)
- Hospital (77)
- Physical therapy (72)

Respondents indicated that the services they most commonly sought out of the area were:

- Clinics (47)
- Dental care (46)
- Hospital (44)
- Optometric/vision services (42)
- Minor surgical procedures (37)
- Pharmacy (36)
- Emergency room (32)
- Laboratory services (31)

As with low-awareness services, these services – for which community members are going elsewhere – may provide opportunities for additional education about their availability from the local health system and potential greater utilization of local services.

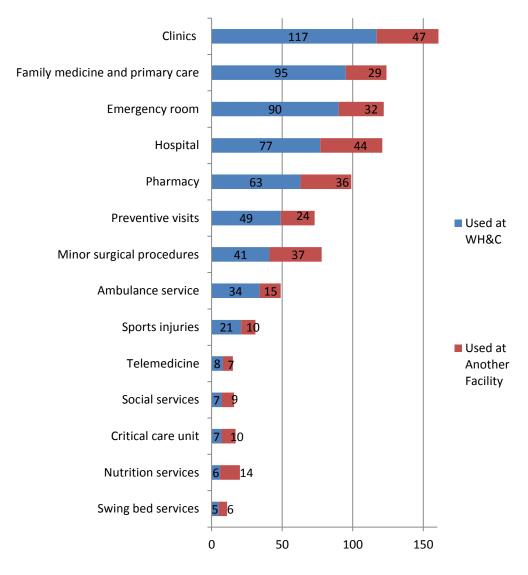

Figure 12: Use of Locally Available General and Acute Health Care Services

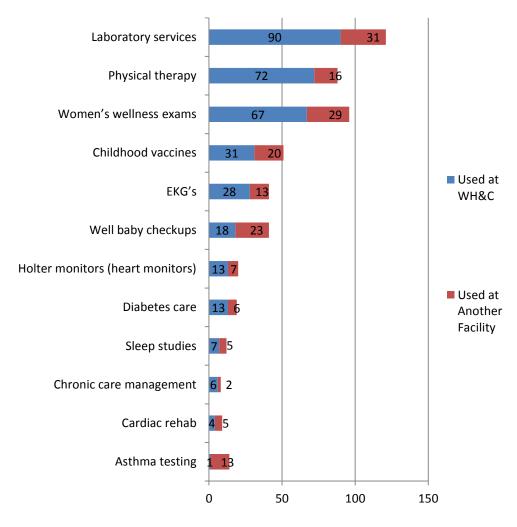

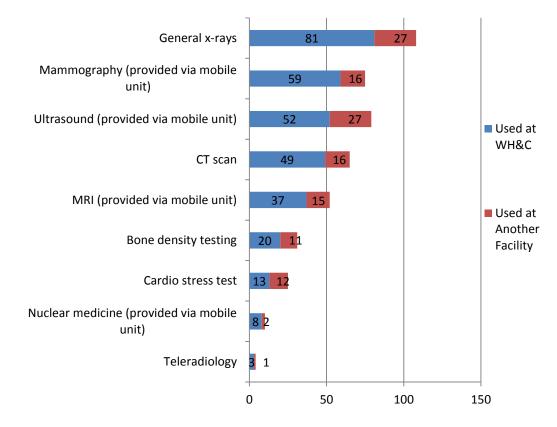

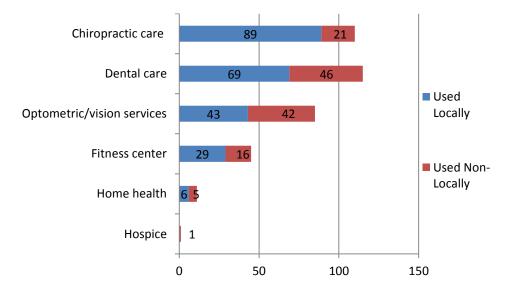

Figure 13: Use of Locally Available Screening/Therapy Services

### Figure 14: Use of Locally Available Radiology Services

# **Additional Services**

In another open-ended question, both community members and health care professionals were asked to identify services they think WH&C needs to add. Forty-three community members provided a response to this question. The largest request, by far, was for hospice services, with more than one in four who responded to this question naming hospice as a need. Among community members, the most common suggestions were (followed by the number of community members making note of the desired service):

- Hospice (N=12)
- Dialysis (N=5)
- Mental health services (N=5)
- Pediatric services (N=5)
- Home health services (N=3)

# Reasons for Using Local Health Care Services and Non-Local Health Care Services

The survey asked community members why they seek health care services at WH&C and why they seek services at another health care facility. Respondents were allowed to choose multiple reasons.

Community members' most common response, by a wide margin, was convenience (N=126). Other reasons commonly cited for seeking care at WH&C were familiarity with providers (N=97), proximity (73), loyalty to local service providers (N=71), and that WH&C takes their insurance (N=70). Figure 16 illustrates these responses.

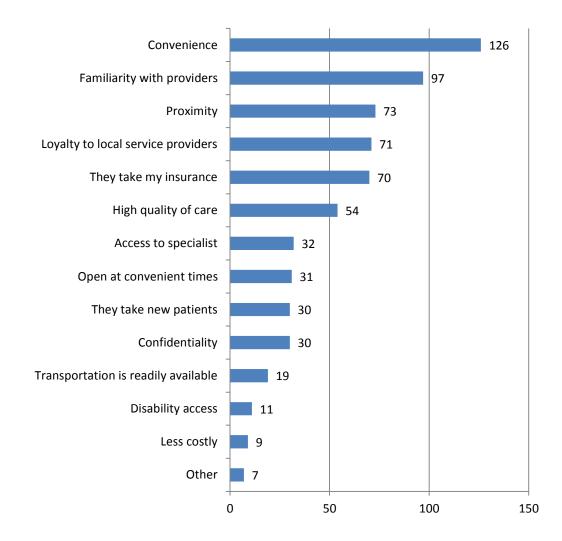

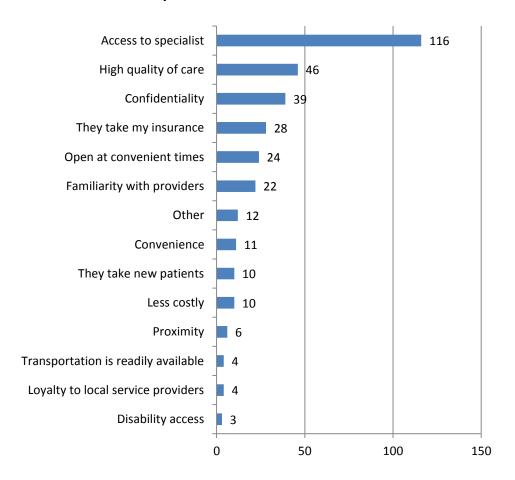

Figure 16: Reasons Community Members Seek Services at Wishek Hospital & Clinics

With respect to the reasons community members seek health care services at other facilities, community members said the primary motivator for seeking care elsewhere was, by a considerable margin, that another facility has a needed specialist (N=116). Other oft-cited reasons for seeking care elsewhere was high quality care (N=46) and confidentiality (N=39). These results are illustrated in Figure 17.

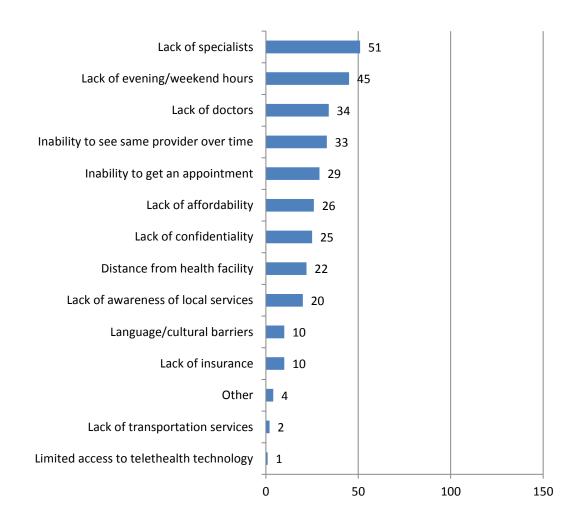

#### Figure 17: Reasons Community Members Seek Services at Other Health Care Facilities

## **Barriers to Accessing Health Care**

Survey-takers were asked what would help to address the reasons why patients do not seek health care services in the Wishek area. Community members' top recommendation (N=51) was that greater access to specialists would help remove a barrier to using local care. The next three most commonly perceived barriers to local care were: lack of evening or weekend hours (N=45), lack of doctors (N=34), and inability to see the same provider over time (N=33).

See Figure 18 for additional items that may help remove barriers to local health care use.

#### Figure 18: Community Members' Perceptions of Barriers to Using Local Care

# **Concerns and Suggestions for Improvement**

Each version of the survey concluded with an open-ended question that asked, "Overall, please share concerns and suggestions to improve the delivery of local health care." Responses were supplied by 21 community members. No clearly dominant themes emerged from these open-ended responses. Several issues did, however, garner opinions and beliefs from multiple commenters. These issues included: (1) perceptions that confidentiality is not always maintained, (2) concerns about costs, (3) a lack of appointment availability, and (4) concerns about care continuity.

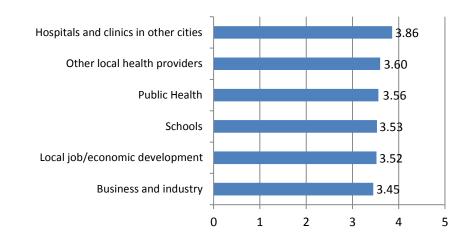

Specific comments that reflect concerns about some of these and other issues included:

• Being rural, if the clinic had later hours for appointments I would travel to Wishek to see a doctor instead of traveling to a larger community.

- HIPAA needs to be enforced more strictly.
- A few more specialists to avoid travel 100 miles.
- Cost prevents me from seeking care more often than I do. High deductibles are crippling.
- It's very hard to get an appointment in Napoleon. If you need a same day appointment or if you need an x-ray we just go to Bismarck.
- Consistently updating the Wishek hospital infrastructure to keep up with needs of the community (PT wing is needed!).
- Improve ambulance and 'on call' medical providers response times at night and weekends.
- Consistency of providers at local hospital/clinics. Continuum of care is a must.
- Need for consistent provider availability.
- Clinic/hospital staff seem to just hang with each other and don't mix with outsiders.
- Confidentiality is so important and there are loose lips employed there.
- Overall I feel that health care everywhere is concerned about billing rather than total patient care.
- Confidentiality with clinic and other hospital.
- Put out more information about what is offered here and when different providers will be available. Confidentiality is also a big concern here, everyone knows everyone, and info gets passed around.
- I feel that doctors/PA's are not given enough time with patients. It always seems that they are rushed and not given enough time to answer questions or explain something.

# Collaboration

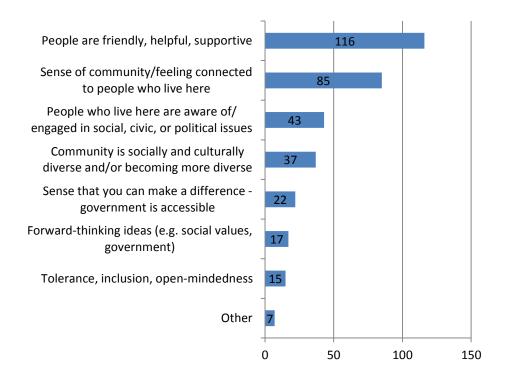

Respondents were asked whether WH&C could improve its levels of collaboration with other local entities, such as schools, economic development organizations, local business and industry, public health, other providers, and hospitals and clinics in other cities. Survey-takers were asked to rank levels of collaboration between WH&C and other stakeholders on a 1-to-5 scale, with 1 indicating no collaboration and 5 indicating excellent collaboration. The survey results reveal that community members saw the most room for improvement in collaboration with business and industry and with local job and economic development organizations. Collaboration with other health care organizations was perceived as stronger. Figure 19, in which a higher number on the 1-to-5 scale represents better perceived collaboration, shows these results.

### Figure 19: Community Collaboration

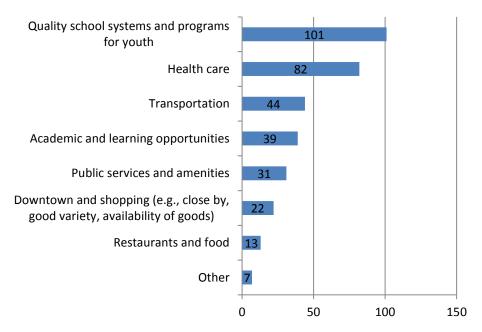

# **Community Assets**

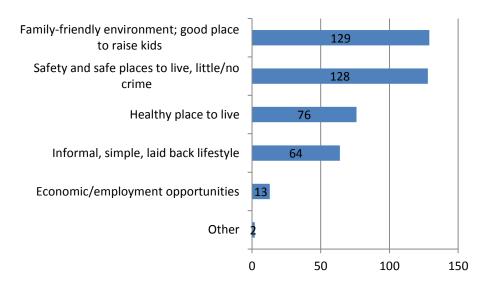

Community members were asked what they perceived as the best things about their community in five categories: people, services and resources, quality of life, geographic setting, and activities. In each category, respondents were given a list of choices and asked to pick the top three. Respondents occasionally chose less than three or more than three choices within each category. The results indicate that residents view as community assets (those items garnering more than 100 responses) things such as friendly and helpful people, quality schools and youth programs, a family-friendly environment, a safe place to live, and cleanliness of the area. Figures 20 to 24 illustrate the results of these questions.

#### Figure 20: Best Things about the PEOPLE in Your Community

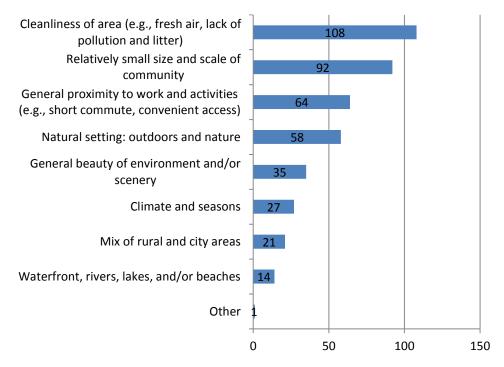

#### Figure 21: Best Things about the SERVICES AND RESOURCES in Your Community

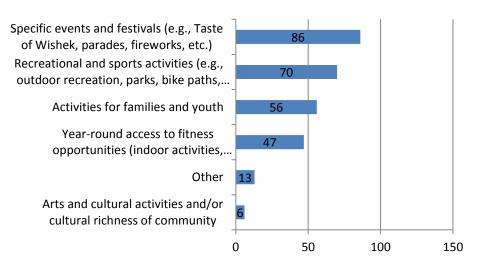

#### Figure 22: Best Things about the QUALITY OF LIFE in Your Community

#### Figure 24: Best Thing about the ACTIVITIES in Your Community

# Findings from Key Informant Interviews and Focus Group

The questions posed in the survey also were explored during a focus group session with the Community Group as well as during key informant interviews with community leaders and public health professionals. The themes that emerged from these sources mirrored many the issues that were prevalent in the secondary data and survey results. This indicates consensus within the community about what are the significant needs that it faces. Generally, overarching thematic issues that developed during the focus group and interviews can be grouped into five categories (listed in no particular order):

- Lack of long-term physicians/continuity of care
- Need for dialysis services
- Cost of health care, insurance, and prescription drugs
- Lack of mental health services
- Desire for more appointment options

With regard to the perceived need for dialysis service, during Community Group meetings a representative of WH&C explained in detail the analysis that has been undertaken to determine whether locally available dialysis services are feasible. A determination has been made that there are not enough potential users of such services within the WH&C trade area for the services to be sustainable, especially in light of the additional staffing that would be required.

To provide context for these expressed needs, below are some of the comments that interviewees and focus group participants made about these issue.

### • Lack of long-term physicians/continuity of care

- People go elsewhere for their care if they're unfamiliar with the physician and staff locally.
- Most physicians coming in are short-term and unfamiliar with the community.
- People like to see the same physician over time. If it's not the same, it gets repetitive to tell your history every time. We need consistency with our providers.

- People will come back if they're comfortable with their provider.
- My piece of advice to improve local health care is to have better continuity of care.
- The PAs (physician assistants) are here to stay. They don't come and go like the doctors.
- We need to keep the PAs we have.
- We need to recruit mid-levels before the current ones retire.
- We need some relief for providers who are here so they stay in the community.

### • Need for dialysis services

- I'm not sure if it's feasible, but dialysis would make a huge difference. The nursing home can't transport people to Bismarck three times a week.
- Have dialysis feasibility studies been done?
- Not having dialysis has a huge impact on the whole community.
- Wishek could be a hub for dialysis and draw patients from Linton and other towns. It could a niche to draw people our way.
- Dialysis is the #1 effect on whether older people can stay in nursing homes around here. There is too high of a cost to transport them, so they move to a larger city and we lose them for good.
- The most immediate need here is for dialysis. If we want to stay competitive and keep people here, we need it.

### • Cost of health care, insurance, and prescription drugs

- It seems like prescription drug costs are up 300-400%.
- Medications are expensive. The elderly are skipping days to try to make their meds last longer. It's either food or pills.
- People with chronic disease need money to pay for all the medications.
- There are some free services, but people don't know about them.
- Insurance premiums are skyrocketing.

### • Lack of mental health services

- We miss the Alzheimer's unit.
- There has been a real need lately for geriatric psych services.

- Kids want to visit with a counselor or therapist face to face, not through a screen.
- There just aren't enough mental health providers around here.
- There's still a stigma about depression. It seems like the help's not there if it's not "bad enough."
- There are long wait times to see mental health providers, so people go to Jamestown or Bismarck.
- This is a big problem for kids. We have suicidal kids.
- There is a large mental health need.
- Telemedicine with a mental health practitioner would be helpful.
- We see people in the community who could really use mental health services

# • Desire for more appointment options

- It's hard to find a time to go in for routine check-ups. Non-traditional hours for appointments would be helpful.
- Walk-in clinics are wonderful.
- The clinic in Napoleon has limited hours for appointments in the afternoon.
- The clinic in Napoleon is often booked for "little things" and so people end up going to Bismarck.
- People go elsewhere if there is a lack of access to providers.
- Increasing hours and days of services in Gackle would help reduce barriers to care.
- The Kulm clinic does a pretty good job of getting people in for appointments, but it's frustrating that a doctor isn't at the clinic more.

# **Priority of Health Needs**

The Community Group held its second meeting on December 2, 2014. Fifteen members of the group attended the meeting. A representative from the Center for Rural Health presented the group with a summary of this report's findings, including background and explanation about the secondary data, highlights from the results of the survey (including perceived community health and community concerns, why patients seek care at WH&C, community collaboration, and barriers to care), and findings from the focus group and key informant interviews.

Following the presentation of the assessment findings, and after consideration of and discussion about the findings, all members of the group were asked to identify what they perceived as the top five community health needs. All of the potential needs were listed on larger poster boards, and each member was given five stickers so they could place a sticker next to each of the five needs they considered the most significant.

The results were totaled, and the concerns most often cited were:

- Cost of health insurance (13 votes)
- Lack of mental health services (12 votes)
- Inability to see same provider over time (7 votes)
- Cost of health care (6 votes)
- Cost of prescription drugs (6 votes)

Based on the Community Group's feedback about the prioritization of community health needs, the needs were categorized into four groups: those receiving six or more votes (listed above), those receiving three to five votes, those receiving one or two votes, and those receiving no votes. A summary of this prioritization may be found in Appendix F.

# Appendix A – Community Member Survey Instrument

#### **Community Health Needs Survey**

Wishek Hospital & Clinics, Central Valley Health District, and McIntosh District Health Unit are interested in hearing from you about area health needs. The Center for Rural Health at the University of North Dakota School of Medicine and Health Sciences is administering this survey on behalf of local health organizations. This initiative is funded by the N.D. Medicare Rural Hospital Flexibility Program at no cost to the local organizations. The focus of this effort is to:

- · Learn about the community's assets and concerns, and hear suggestions for improvement
- Learn of the community's awareness of local health care services being provided
- Determine preferences for using local health care services versus traveling to other facilities

Please take a few moments to complete the survey. If you prefer, this survey may be completed online by visiting: www.tinyurl.com/wishek. Your responses are anonymous – and you may skip any question you do not want to answer. Your answers will be combined with other responses and reported in aggregate form. If you have questions about the survey, you may contact Ken Hall at the Center for Rural Health, 701.777.6046, kenneth.hall@med.und.edu.

Surveys will be accepted through October 31, 2014. Your opinion matters - thank you in advance!

#### Community Health and Wellness Concerns

Q1a. Regarding the conditions <u>in your community</u>, in the following series of categories please rank each of the potential concerns on a scale of 1 to 5, with 1 being <u>less of a concern</u> and 5 being <u>more of a concern</u>:

Access to health care		Less of a concern		More of a concern	
	1	2	3	4	5
Access to dental and/or vision care					
Access to needed technology/equipment					
Adequacy of health insurance (e.g., amount of co-pays, deductibles)					
Availability of doctors, nurses, specialists					
Availability of medical appointments					
Availability of mental health services and providers					
Availability of wellness and prevention services					
Coordination of care among different providers					
Cost of health care					
Cost of health insurance					
Cost of prescription drugs					
Distance/transportation to health care facility					
Emergency services (ambulance & 911) available 24/7					
Financial viability of hospital					
Non-traditional hours for appointments (e.g., evenings, weekends)					
Not enough health care staff in general					
Patient confidentiality					
Other. Please specify:					

	Less	of		Mo	re of
Community/environmental concerns	a concern			a concern	
	1	2	3	4	5
Adequate availability of child daycare					
Adequate school resources					
Aging population, lack of resources to meet growing needs					
Changes in population (increasing or decreasing)					
Crime and safety					
Environmentally unsound (or unfriendly) place to live					
Insufficient facilities for exercise and well-being					
Lack of affordable housing					
Lack of employees to fill positions					
Lack of employment opportunities					
Lack of police presence in community					
Low wages, lack of livable wages					
Poverty					
Racism, prejudice, hate, discrimination					
Traffic safety, including speeding, road safety, and drunk driving					
Violence (domestic, child abuse, workplace, emotional, physical, sexual)					
Other. Please specify:					

	Less	of		Mo	re of
Physical and mental health concerns	a co	a concern		a concern	
	1	2	3	4	5
Alcohol use and abuse					
Cancer					
Chronic disease (e.g., diabetes, heart disease)					
Communicable diseases (e.g., sexually transmitted diseases, AIDS)					
Drug use and abuse					
Focus on wellness and prevention of disease					
Inactivity/lack of exercise					
Mental health (e.g., depression, dementia/Alzheimer's disease, stress)					
Obesity					
Poor nutrition/eating habits					
Smoking and tobacco use/exposure to second-hand smoke					
Suicide					
Other. Please specify:					

Q1b. How do the concerns above impact your community?

#### Community Assets/Best Things about Your Community

Please tell us about your community by choosing up to three options you most agree with in each category (i.e., people, services and resources, quality of life, geographic setting, and activities).

Q2a. Considering the PEOPLE in your community, the best things are (choose up to THREE):

Community is socially and culturally diverse and/or becoming more diverse	Sense of community/feeling connected to people who live here
Forward-thinking ideas (e.g. social values, government)	Sense that you can make a difference – government is accessible
People who live here are aware of/ engaged in social, civic, or political issues	Tolerance, inclusion, open- mindedness
People are friendly, helpful, supportive	Other (please specify)

Q2b. Considering the SERVICES AND RESOURCES in your community, the best things are (choose up to THREE):

+++	

Ŧ.		
[	Academic and learning opportunities	Public services and amenities
	Downtown and shopping (e.g., close by, good variety, availability of goods)	Restaurants and food
	Health care	Transportation
	Quality school systems and programs for youth	Other (please specify)
		[

Q2c. Considering the QUALITY OF LIFE in your community, the best things are (choose up to THREE):

Economic/employment opportunities	Informal, simple, laidback lifestyle
Family-friendly environment; good place to raise kids	Safety and safe places to live, little/no crime
Healthy place to live	Other (please specify)

Q2d. Considering the ACTIVITIES in your community, the best things are (choose up to THREE):

Activities for families and youth	Specific events and festivals (e.g., Taste of Wishek, parades, fireworks, etc.)
Arts and cultural activities and/or cultural richness of community	Year-round access to fitness opportunities (indoor activities, winter sports, etc.)
Recreational and sports activities (e.g., outdoor recreation, parks, bike paths, and other activities)	Other (please specify)

Q2e. Considering the GEOGRAPHIC SETTING in your community, the best things are (choose up to THREE):

Cleanliness of area (e.g., fresh air, lack of pollution and litter)	Natural setting: outdoors and nature
Climate and seasons	Relatively small size and scale of community
General beauty of environment and/or scenery	Waterfront, rivers, lakes, and/or beaches
General proximity to work and activities (e.g., short commute, convenient access)	Other (please specify)
Mix of rural and city areas	

Q2f. What are other "best things" about your community that are not reflected in the questions above?

#### **Health Care Services**

Q3a. Regarding each of the following health care services, please tell us:

- a) Whether you are aware that the health care service is offered at Wishek Hospital & Clinics (WH&C).
- b) Whether you have used the health care service at Wishek Hospital & Clinics (WH&C), at another facility, or both.

For each service listed, check all applicable boxes.

#### General and acute services

Type of service offered	Yes, I am aware of this service at WH&C	I have used this service at WH&C	I have used this service at another facility
Ambulance service			
Clinics			
Critical care unit			
Emergency room			
Family medicine and primary care			
Hospital			
Minor surgical procedures			
Nutrition services			
Pharmacy			
Preventive visits			
Social services			
Sports injuries			
Swing bed services			
Telemedicine			

#### Screening/therapy services

Type of service offered	Yes, I am aware of this service at WH&C	I have used this service at WH&C	I have used this service at another facility
Asthma testing			
Cardiac rehab			
Childhood vaccines			
Chronic care management			
Diabetes care			
EKG's			
Holter monitors (heart monitors)			
Laboratory services			
Physical therapy			
Sleep studies			
Well baby checkups			
Women's wellness exams			

#### + Radiology services

Type of service offered	Yes, I am aware of this service at WH&C	I have used this service at WH&C	I have used this service at another facility
Bone density testing			
Cardio stress test			
CT scan			
General x-rays			
Mammography			
MRI (provided via mobile unit)			
Nuclear medicine (provided via mobile unit)			
Teleradiology			
Ultrasound (provided via mobile unit)			

#### Services offered locally by other providers/organizations

Type of service offered	Yes, I am aware of this service offered locally	I have used this service locally	I have used this service at another facility
Chiropractic care			
Dental care			
Fitness center			
Home health			
Hospice			
Optometric/vision services			

Q3b. What specific services, if any, do you think Wishek Hospital & Clinics needs to add, and why?

#### **Delivery of Health Care**

- Q4. Please tell us why you seek health care services at <u>Wishek Hospital & Clinics</u>. (Choose ALL that apply.)
  - Access to specialist
  - Confidentiality
  - Convenience
  - Disability access
  - Familiarity with providers
  - High quality of care
  - Less costly

- Loyalty to local service providers
- Open at convenient times
- Proximity
- They take my insurance
- They take new patients
- Transportation is readily available
- Other: (Please specify)\_\_\_\_\_
- Q5. Please tell us why you seek health care services at <u>another health care facility</u>. (Choose ALL that apply.)

+‡+

- Access to specialist
- Confidentiality
- Convenience
- Disability access
- Familiarity with providers
- High quality of care
- Less costly

- Loyalty to local service providers
- Open at convenient times
- Proximity
- They take my insurance
- They take new patients
- Transportation is readily available
- Other: (Please specify)\_\_\_\_\_
- Q6. What barriers prevent you or other community members from receiving health care? (Choose ALL that apply.)
  - Distance from health facility
  - Inability to get appointment
  - Inability to see same provider over time
  - Lack of affordability
  - Lack of awareness of local services
  - Lack of confidentiality
  - Limited access to telehealth technology (patients seen by providers at another facility through a monitor/TV screen)
- Lack of doctors
- Lack of evening or weekend hours
- Lack of insurance
- Lack of specialists
- Lack of transportation services
- Language/cultural barriers
- Other: (Please specify)\_\_\_\_\_\_

### LaMoure County Community Health Profile POPULATION

The Demographic Section of this report comes from the US Cansus Bureau (www.census.gov). Most tables are derived either from the full (100%) census taken in 2010 or from the Community Population Survey aggregated over a several year period. The table header describes the specific years from which the data is derived. The table showing percent population change uses census data from 2000 also. Tables present number of persons and percentages which in almost all circumstances represent the category specific percentage of all persons referenced by the table (e.g., percentage of persons age 15 and older who are married). Age specific poverty rates represent the percentage of each age group which is in poverty (e.g., percentage of children under five years in poverty).

#### Vital Statistics Data BIRTHS AND DEATHS

Vital Statistics Data comes from the birth and death records collected by the State of North Dakota aggregated over a five year period. All births and deaths represent the county of residence not the county of occurrence. The number of events is blocked if fewer than six. Formulas for calculating rates and ratios are as follows: Birth Rate = Resident live births divided by the total resident population x 1000.

Pregnancies = Live births + Fetal deaths + Induced termination of pregnancy.

Pregnancy Rate = Total pregnancies divided b the total resident population x 1000.

Fertility Rate = Resident live births divided by female population (age 15-44) x 1000.

Teenage Birth Rate = Teenage births (age <20) divided by female teen population x 1000. Teenage Pregnancy Rate = Teenage prognancies (age <20) divided by female teen population x 1000. Out of Wedlock Live Birth Ratio = Resident OOW live births divided by total resident live births x 1000.

Out of Wedlock Pregnancy Ratio = Resident OOW pregnancies divided by total pregnancies x 1000.

Low Weight Ratio = Low weight births (birth weight < 2500 grams) divided by total resident live births x 1000. Infant Death Ratio = Number of infant deaths divided by the total resident live births x 1000. Childhood & Adolescent Deaths = Deaths to individuals 1 - 19 years of age.

Childhood and Adolescent Death Rate = Number of resident deaths (age 1 - 19) divided by population (age 1 - 19) x 100,000.

Crude Death Rate = Death events divided by population x 100,000. Age-Adjusted Death Rate = Death events with age specific adjustments x 100,000 population.

#### ADULT BEHAVIORAL RISK FACTORS, 2001-2010

Adult Behavioral Risk Factor data are derived from aggregated data (the number of years specified is in the table) continuously collected by telephone survey from persons 18 years and older. All data is self-reported data. Numbers given are point estimate percentages followed by 95% confidence intervals. Statistical significance can be determined by comparing confidence intervals between two geographic areas. To be statistically significant, confidence may not overlap. For example the confidence intervals 9.3 (8.3-10.2) and 10.8 (10.0-11.6) overlap (see picture below) so the difference between the two numbers is not statistically significant. That means that substantial uncertainty remains whether the apparent difference is due to chance alone (due to sampling variation) rather than representing a true difference in the prevalence of the condition in the two populations. The less they overlap, the more likely it is that the point estimates represent truly different prevalences in the two populations.

### LaMoure County Community Health Profile CHILD HEALTH INDICATORS

Child Health Indicators are selected from Kid's Count data reported on the web. The descriptive line tells what the number present and the part of the description in parentheses tells what the number in parentheses means. If the year of the data is different than other data in the table, the year is footnoted.

CHILD HEALTH INDICATORS		
Child Indicators: Education 2011	LaMoure County	North Dak
Children Ages 3 to 4 In Head Start (Percent of eligible 3 to 4 year olds)"	15 (100)	2,607 (6
